For clinicians today, the amount of information available can be overwhelming. Does emerging evidence question existing practices; has a previous finding been overturned through new research? These key questions inform evidence-based practice decisions, enabling delivery of the most appropriate level of care.

**Issue**

Ask an Informationist is an initiative that translates clinical questions into practice. A clinical question is submitted to the Austin Health Choosing Wisely Steering Committee. The Austin Health Sciences Library team create an infographic as a visual summary of the available evidence, supported by a written report.

**Objective**

When coupled with audit data or local policies and procedures, this provides an evidence-rich foundation for clinicians to initiate change and “Choose Wisely” in their delivery of patient care.

**Impact**

Through this collaboration we are:

- engaging with the evidence
- encouraging critical thinking
- shaping the future of our patient care

**Outcome**

The initiative has:

- driven change in emergency department practice for intravenous magnesium use;
- led to delivery of clinical education around PPIs through workshops and media activities;
- been a catalyst for broader discussion around opioid use throughout the hospital.

To date, six infographics and reports have been produced and have been made publicly available.
